

Discovering a lost species

The Ivory-billed Woodpecker disappeared from the forests of southeastern North America in the early twentieth century, and has been widely **considered extinct for more than 60 years**. Searching through flooded cypress swamps over the last year, University of Windsor Biologist Dr. Daniel Mennill and an international team of researchers have collected evidence suggesting that Ivory-billed Woodpeckers persist in Florida. In this public lecture, **Dr. Mennill will tell the Ivory-billed story**, provide details about the re-discovery, and recount how a team of University of Windsor biologists have developed sophisticated techniques for **finding the king of woodpeckers**.

**Meet Dr. Daniel Mennill at a
FREE presentation on his discovery**

Tuesday December 5, 2006 at 7:00 p.m.
Canada South Science City
930 Marion Avenue, Windsor

Presented as part of the Youth Science & Technology Outreach Program. An excellent opportunity for young people and their family to interact with a Research Scientist. For more information please call 519-973-3667
